## Research projects and research groups

### Coping with Risk in Maritime Logistics – Managing risk, vulnerability and resilience in maritime logistics chains

The Norwegian University of Science and Technology, NTNU's, ROSS centre (Reliability Safety and Security Studies), is starting up a research program into risk and resilience of supply chain management in shipping.

The main objective of this research project is to develop new competence to approach, analyse and manage risks and vulnerabilities that origin when ship-owners want to take more formal and comprehensive part in maritime logistics chains. The main research question is: How should we be able to engineer resilience into the maritime logistics chain that meets the vulnerability and risk taxonomies of the context, and finally be able to analyse and manage the vulnerability and risk scenarios in a proactive manner?

Six PhD fellowships and one post doctoral fellowship will become available as part of the program, and their research topics will be linked to the programs part objectives.

The program will be run in co-operation with the maritime research company MARINTEK, ([www.marintek.com](http://www.marintek.com)) and the maritime insurance company GARD ([www.gard.no](http://www.gard.no)). Shipping companies, cargo owners and petroleum companies will also participate as stakeholders in the project.

For further information, please contact Bjørn Asbjørnslett at NTNU, [bjorn.e.asbjornsllett@ntnu.no](mailto:bjorn.e.asbjornsllett@ntnu.no).
